

## Introducing Stratus InPerson:

A geolocation app to reach out to onsite interpreters directly

with Stratus Video Executive Director, Tom Thompson

### The app:

Stratus InPerson is a next-generation geolocation application that puts you in direct contact with local interpreters. The application allows you to manage all onsite interpretation from one convenient location. It is quick, easy to use and highly customizable.

### Why it was developed:

Stratus initially entered the interpreting market as a VRI (Video Remote Interpreting) provider and recognized the ongoing need for on-site interpreters. Stratus developed Stratus InPerson as an all-encompassing solution for all of your onsite interpreter needs.

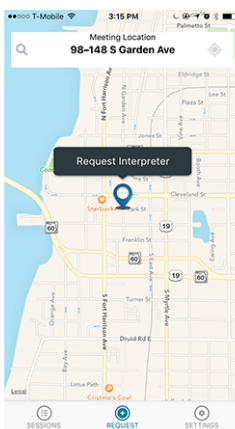

### What's in it for hospitals:

Stratus InPerson offers one interface to manage onsite language access services with a highly customizable platform. You have direct access to a larger and more diverse pool of interpreters. The service reduces hospital costs while maintaining interpreter pay scales. All interpreters are 1099 contractors with Stratus and are paid by Stratus.

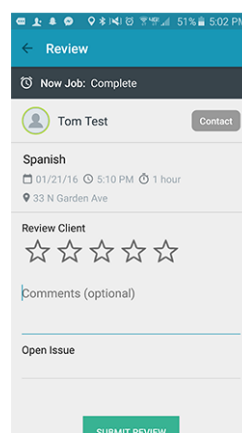

### What's in it for interpreters:

Stratus InPerson offers interpreters a larger pool of potential clients. Interpreters can manage their schedules & earnings directly in the app. If you'd like to see first hand how the app works, go to your app store and download the Stratus InPerson app.

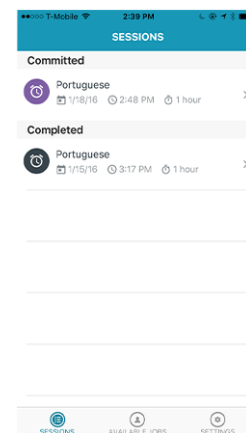

### How it works:

Request an interpreter

Rate the session

Manage scheduling
